

BECOOOP

UNLOCKING THE COMMUNITY BIOENERGY POTENTIAL

For a fair and people-powered energy system, BECoop (2020-2023), a project supported by the European Horizon 2020 programme, aims at putting communities in charge of their local renewable (bio)energy generation.

BECoop key goals and activities

BECoop provides the necessary conditions and technical as well as business support tools for unlocking the underlying market potential of community bioenergy, fostering new links and partnerships. 4 pilot cases across Europe will target existing energy communities seeking to include bioenergy heating projects, and local/national authorities aiming at initiating novel bioenergy community structures in support of their clean energy transition goals. To support community bioenergy heating development, BECoop will :

Carry out market research, identify drivers and barriers for the uptake of bioenergy technologies and evaluate the bioenergy community market potential

Ensure ecosystem and capacity building with communication campaigns and events

Establish a suite of supporting resources, tools, technical and business services to support community bioenergy project development

Empower the community bioenergy ecosystem to expand across Europe

Create new bioenergy heating communities and boost demand for bioenergy

Engage policymakers at all scales (regional, national and EU)
